

Abstract:

Supply Device

The invention relates to a supply device for the supply of pressure fluid into at least one vehicle brake or into a pressure fluid accumulator, wherein a piston 2 is movably arranged in an accommodating member 4, a carrier 6 bears a non-return valve 7 arranged coaxially to the piston 2 for the purpose of ventilating a working chamber 11 into which the piston plunges 2, and wherein a resetting spring 5 is arranged between the carrier 6 and the piston 2.

It is the essence of the invention that there is provision of a multi-piece cage 16 for preloading the resetting spring 5 with fastening means 20 of opposing action which permit simultaneously preloading the resetting spring 5 and fastening the cage parts 17, 18 to each other as a result of a movement of the cage parts (17, 18) relative to each other.
